Existing and Deleted SIF Objects –
Representation and Validation

DELETED OBJECTS - REPRESENTATION

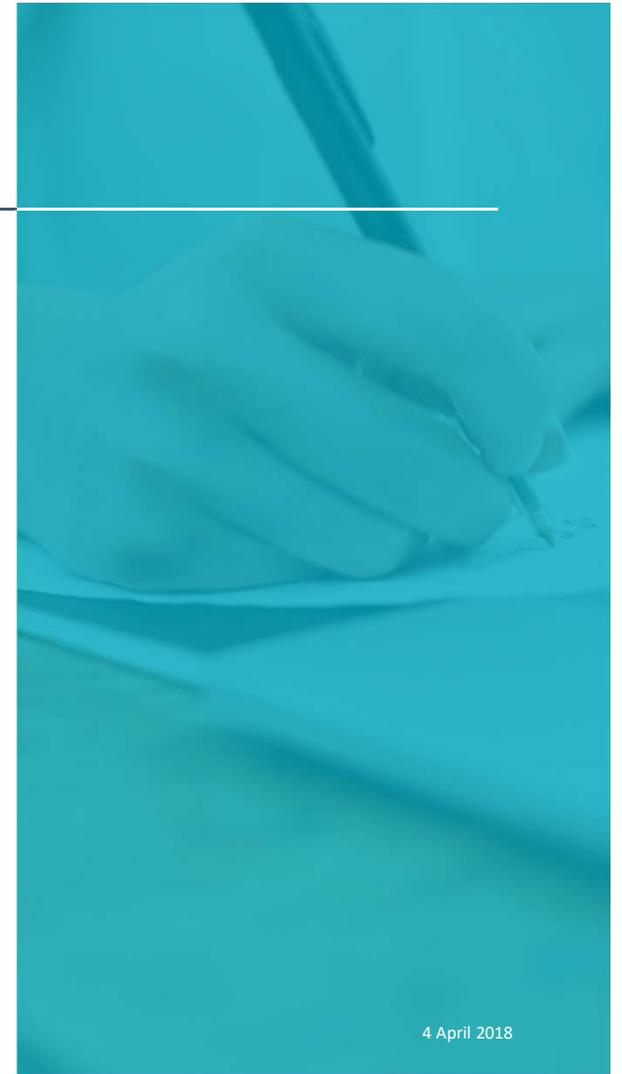

- An XML without any embedded elements, e.g.
`<TeachingGroup RefId="tg5" />`

- Where are they used?
 1. queries with changesSinceMarker (already part of SIF infrastructure specification)
 2. (data model v3.4.3 RC) long running paged queries while some objects were deleted in-flight

COLLECTION OF EXISTING & DELETED OBJECTS - REPRESENTATION

```
<TeachingGroups>
  <TeachingGroup RefId="tg4">
    ...
  </TeachingGroup>
  <TeachingGroup RefId="tg5" />
  <TeachingGroup RefId="tg6">
    ...
  </TeachingGroup>
</TeachingGroups>
```

SIF DATA MODEL SCHEMA

“Strict”

- Embedded elements/attributes declared as mandatory as required:

```
<xs:complexType name="TeachingGroupType">
  <xs:sequence>
    <xs:element
      name="LocalId"
      type="LocalIdType" />
  </xs:sequence>
</xs:complexType>
```

“Lax”

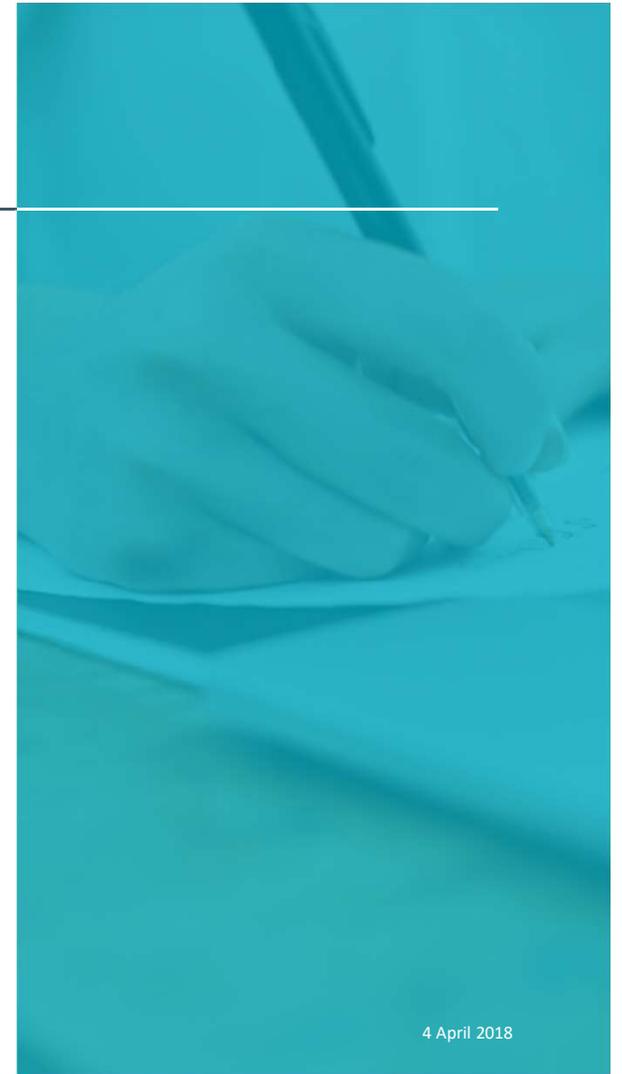

- Every element/attribute is declared as optional:

```
<xs:complexType name="TeachingGroupType">
  <xs:sequence>
    <xs:element
      name="LocalId"
      type="LocalIdType"
      minOccurs="0" />
  </xs:sequence>
</xs:complexType>
```

<http://specification.sifassociation.org/Implementation/AU/3.4.3/2/DataModel.html#PayloadValidation>

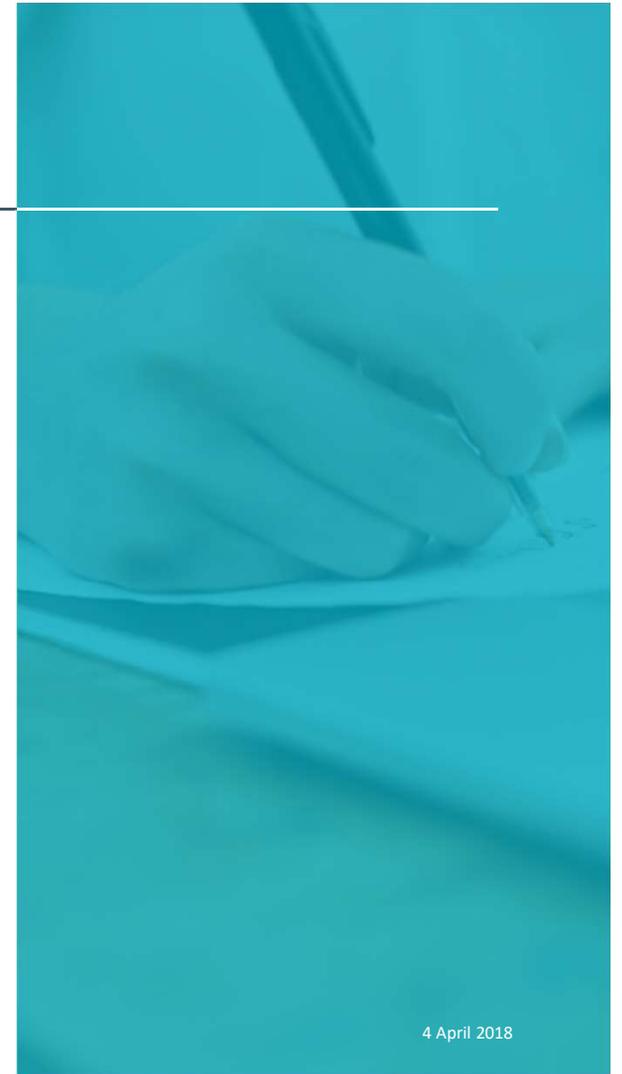

COLLECTION OF EXISTING & DELETED OBJECTS – SIF PROVIDER SIDE

- v3.4.3
 - Use “lax” schema to generate outbound XML
 - Use “strict” schema to parse inbound XML (non-SIF events)
 - Use “lax” schema to parse inbound XML (SIF events)
- Beyond v3.4.3
 - Explore xs:nillable=true such that the “strict” schema can also be used for both outbound and inbound XML

COLLECTION OF EXISTING & DELETED OBJECTS – SIF CONSUMER SIDE

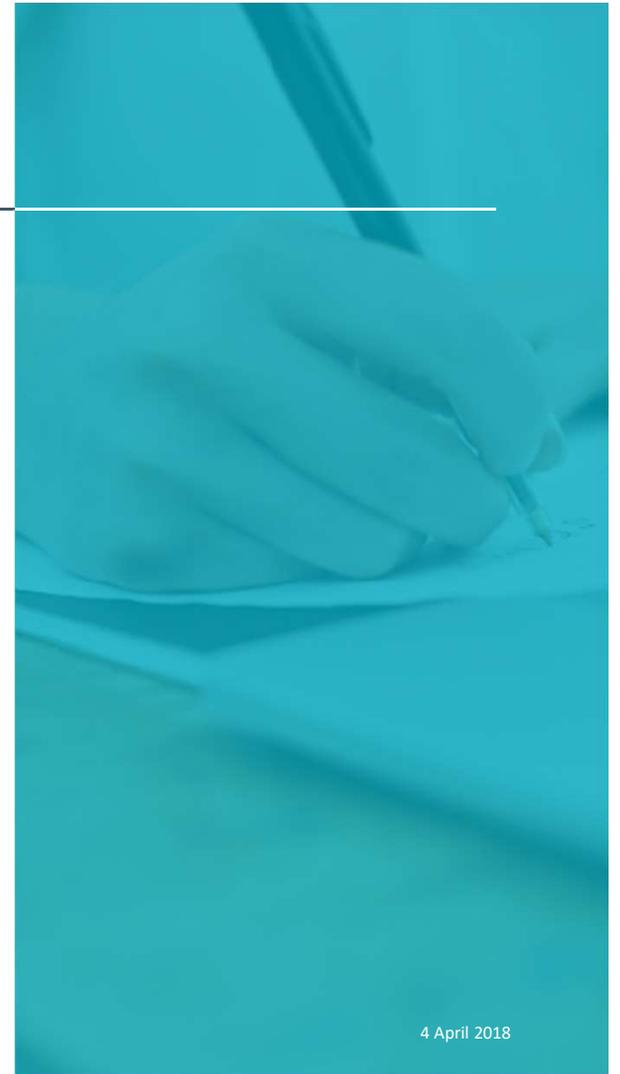

- Create invocation
 - Use “strict” to create XML to provider
- Update invocation
 - Use “strict” to create XML to provider
- Update using SIF events
 - Use “lax” to create XML to provider

COLLECTION OF EXISTING & DELETED OBJECTS – SIF CONSUMER SIDE

- Get (deleted objects not expected)
 - Use “strict” to parse XML from provider

- Get (deleted objects expected)
 - No single schema to parse both existing and deleted objects in the same collection XML
 - 3.4.3: use “lax” schema to parse collection XML
 - All mandatory elements/attributes must be checked after XML parsing
 - Beyond 3.4.3: explore xs:nillable=true
