Note: SIF_Message schemas define every data object element as optional per SIF's Publish/Subscribe and SIF Request/Response Models; DataModel schemas maintain the cardinality of all data object elements.

JSON Schemas

JSON Schema definition - for CREATE (json)(yaml)

JSON Schema definition - for UPDATE (json)(yaml)

Sample Open API definition (json)(yaml)

Note: The Open API definition presented, is a sample specification, and will need to be augmented:

Responses for POST, PUT & DELETE verbs must be chosen

Decide which requests can accept / return single object or object collection

Decide which SIF Infrastructure API endpoints are to be included

Please refer to the errata for this document, which may include some normative corrections.

This document is also available in these non-normative formats: ZIP archive, PDF (for printing as a single file), Excel spreadsheet.

1 Preamble

1.1 Abstract

1.1.1 What is SIF?

SIF is not a product, but a technical blueprint for enabling diverse applications to interact and share data related to entities in the pK-12 instructional and administrative environment. SIF is designed to:

- Facilitate data sharing and reporting between applications without incurring expensive customer development costs;
- Enhance product functionality efficiently; and
- Provide best-of-breed solutions to customers easily and seamlessly.

The SIF Implementation Specification defines common data formats and rules of interaction and architecture, and is made up of two parts:

- 1. The SIF Infrastructure Implementation Specification which defines the rules of interaction and messages framework, and;
- 2. The SIF Data Model Implementation Specification which is an XML-based data model that models entities in the learning environment as SIF Data Objects to be shared between applications; This document only describes the SIF Data Model for Australia.

SIF 3 Infrastructure defines;

- 🧆 a secure REST-based transport protocol for defining both direct and brokered connections between software applications (which can act as REST servers or clients)
- a set of services to enable interactions between REST servers and clients, including creating environments, other administrative task, synchronous exchanges of data, and asynchronous message queues
- an abstract, platform-independent definition of the API between one software application and another or a broker.
- A SIF Environment is a distributed system that consists of one or more software applications with a SIF Adapter (a SIF-enabled application) sharing/reporting one or more SIF data objects over a network; it may also involve middleware (a message broker). A SIF Implementation consists of one or more SIF Environments deployed and configured to meet customer data sharing and reporting needs.
- The SIF Implementation Specification defines architecture requirements and communication protocols for software components and the interfaces between them; it makes no assumption of specific hardware or software products needed to develop SIF-enabled applications and/or middleware implementations, other than their ability to support technologies leveraged as the foundation for SIF, most prominently XML and HTTP(S) and including JSON and REST.

1.1.1.1 What is SIF (NZ)?

SIF Specification (New Zealand) defines a set of data objects supporting New Zealand's interoperability requirements for its education system and combines this data model with established infrastructure protocols from the SIF Implementation Specification [SIF]. SIF Specification (New Zealand) 3.4 leverages the SIF architecture and refers to SIF Infrastructure Specifications greater than 3.0.1 [SIF 3.x] to support its data objects, with a New Zealand-specific namespace and the data objects defined in this specification. Technical readers should note that the version number internal to SIF XML messages identifies the version number of the SIF Data Model.

1.1.2 SIF Interoperability Framework Association

The Schools Interoperability Framework Association (SIF Association); known in Australia as; The Systems Interoperability Framework Association, is an industry initiative to enable interoperability and data sharing between software applications in the pK-12 instructional and administrative environment, and the forum for companies and educators to participate in the development of SIF specifications in the SIF Association's working groups and task forces. The SIF Association is designed to:

- Join industry leaders in creating the next-generation framework for education technology; and
- Leverage co-marketing opportunities with partners and distributors.

1.2 Disclaimer

The information, software, products, and services included in the SIF Implementation Specification may include inaccuracies or typographical errors. Changes are periodically added to the information herein. The SIF Association may make improvements and/or changes in this document at any time without notification. Information contained in this document should not be relied upon for personal, medical, legal, or financial decisions. Appropriate professionals should be consulted for advice tailored to specific situations.

THE SIF ASSOCIATION, ITS PARTICIPANT(S), AND THIRD PARTY CONTENT PROVIDERS MAKE NO REPRESENTATIONS ABOUT THE SUITABILITY, RELIABILITY, TIMELINESS, AND ACCURACY OF THE INFORMATION, SOFTWARE, PRODUCTS, SERVICES, AND RELATED GRAPHICS CONTAINED IN THIS DOCUMENT FOR ANY PURPOSE. ALL SUCH INFORMATION, SOFTWARE, PRODUCTS, SERVICES, AND RELATED GRAPHICS ARE PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND. THE SIF ASSOCIATION AND/OR ITS PARTICIPANT(S) HEREBY DISCLAIM ALL WARRANTIES AND CONDITIONS WITH REGARD TO THIS INFORMATION, SOFTWARE, PRODUCTS, SERVICES, AND RELATED GRAPHICS, INCLUDING ALL IMPLIED WARRANTIES AND CONDITIONS OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, AND NON-INFRINGEMENT.

IN NO EVENT SHALL THE SIF ASSOCIATION, ITS PARTICIPANT(S), OR THIRD PARTY CONTENT PROVIDERS BE LIABLE FOR ANY DIRECT, INDIRECT, PUNITIVE, INCIDENTAL, SPECIAL, CONSEQUENTIAL DAMAGES, OR ANY DAMAGES WHATSOEVER INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOSS OF USE, DATA, OR PROFITS, ARISING OUT OF OR IN ANY WAY CONNECTED WITH THE USE OR PERFORMANCE OF THIS DOCUMENT, WITH THE DELAY OR INABILITY TO USE THE DOCUMENT, THE PROVISION OF OR FAILURE TO PROVIDE SERVICES, OR FOR ANY INFORMATION, SOFTWARE, PRODUCTS, SERVICES AND RELATED GRAPHICS OBTAINED THROUGH THIS DOCUMENT OR OTHERWISE ARISING OUT OF THE USE OF THIS DOCUMENT, WHETHER BASED ON CONTRACT, TORT, STRICT LIABILITY, OR OTHERWISE, EVEN IF THE SIF ASSOCIATION, ITS PARTICIPANT(S), OR THIRD PARTY CONTENT PROVIDERS HAVE BEEN ADVISED OF THE POSSIBILITY OF DAMAGES. BECAUSE SOME STATES/JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF LIABILITY FOR CONSEQUENTIAL OR INCIDENTAL DAMAGES, THE ABOVE LIMITATION MAY NOT APPLY TO YOU. IF YOU ARE DISSATISFIED WITH ANY PORTION OF THIS DOCUMENT.

This specification is released with the following provisos to developers and educators.

1.3 Certification and Compliance Claims

Though a product may be demonstrated to comply with this specification, no product may be designated as SIF Certified M by an organization or individual until the product has been tested against and passed established compliance criteria, published separately [SIFCertification]. Organizations and individuals that are currently paying annual membership dues to the SIF Association and dedicating resources to the initiative may also use the designation SIF Participant to describe their involvement with the SIF Association and SIF in marketing, public relations and other materials.

1.4 Permissions and Copyright

This document and translations of it may be copied and furnished to others, and derivative works that comment on or otherwise explain it or assist in its implementation may be prepared, copied, published and distributed, in whole or in part, without restriction of any kind, provided that the above copyright notice and this paragraph are included on all such copies and derivative works. However, this document itself may not be modified in any way, such as by removing the copyright notice or references to the SIF Association, or its committees, except as needed for the purpose of developing SIF standards using procedures approved by the SIF Association, or as required to translate it into languages other than English. The limited permissions granted above are perpetual and will not be revoked by the SIF Association or its successors or assigns.

2 Introduction

2.1 Specification Organization

With respect to the SIF Specification, educators and non-technical readers are typically interested in the pK-12 data objects that can be shared and reported on by SIF-enabled applications in SIF implementations. This document, the SIF Data Model Implementation Specification, contains a Data Model section in a format that should not be a barrier to readers with a some knowledge of [XML]. More technical readers, including software architects, developers and integrators, will also be interested in the separate SIF Infrastructure Implementation Specification document.

- The Preamble provides an abstract of SIF along with the SIF Association disclaimer and details regarding certification and compliance claims.
- This Introduction outlines the organization of this specification document, provides conventions used in this document, and summarizes versioning of the specification. Highlights of additions/changes since the previous version of the specification are also provided.
- The Data Model section provides definitions of the XML structure for common elements in the data model and all objects related to entities in the pK-12 environment. This section is organized by the working groups and task forces within the SIF Association that have defined common elements or objects.
- The document concludes with various appendices including lists of code set values defined within SIF and in external documents, and ends with a list of references to other documents.

2.2 Document Conventions

2.2.1 Definitions

The first time a term or concept is defined, it may be emphasized.

2.2.2 Structure and Values

SIF message and object names, XML element tags, attribute names and values, and other codes or values are typically presented as in this sentence.

2.2.3 Examples

JSON

Example 2.2.3-1: Examples Convention

2.2.4 References

References to other works occurring in this text are given in brackets, e.g. [REFERENCE]. The text in brackets corresponds to a key in the References appendix. Often when the text in the brackets duplicates surrounding text, the reference alone is used (e.g. [XML] instead of XML [XML]).

2.2.5 Terminology

The key words must, must not, required, shall, shall not, should, should not, recommended, may, optional, when emphasized, are to be interpreted as described in [RFC 2119].

2.2.6 XML Diagrams

Quick overviews of XML structures, including messages, objects, common elements and types, are provided in XML diagrams. The following diagram illustrates the conventions typically encountered in SIF.

XML Diagram Conventions

Figure 2.2.6-1: XML Diagram Conventions

XML elements are represented by rectangles with the name of the element in the upper portion and the type, if any, in the lower portion. Attributes are represented in the same fashion, but have an @ icon rather than a SIF icon. Elements and attributes that are optional have a circled ? (0 or 1 occurrence) to the left of the rectangle. Optional and mandatory repeatable elements are indicated by a circled * (0 or more occurrences) and + (1 or more occurrences), respectively. Element attributes are grouped together in a rectangular block and connected to the element with a line that turns at right angles. Ordered sequences of XML elements are bracketed by lines that turn at right angles. When a choice of XML elements is indicated, the elements are bracketed by angled lines. A choice of elements can occur within an element, or may be an unnamed choice of elements.

XML types are represented using the same conventions as for XML elements, though the type portion of the rectangle typically indicates a base type, if any.

The type name of any element, attribute or type may be prefixed with a \downarrow , indicating the type is restricted in some fashion by one or more XML Schema facets (e.g. enumeration). When the type is a union of types, a list of types is presented, each type separated by \mid ; if the list of union types is long, the list may be marked with ellipses, e.g., \mid ...

In an actual XML diagram, element, type and attribute rectangles are usually linked to their corresponding definitions/descriptions in accompanying tables.

2.3 Version Numbers

The SIF Implementation Specification uses the following version numbering scheme:

major version minor version revision number

Major versions typically introduce additions/changes to the SIF infrastructure and/or data model changes that impact a significant percentage of SIF-enabled applications (e.g. making previously optional elements mandatory, removal of deprecated objects, elements or values). The first release of a major version has a minor version of θ (2.0); major version numbers start at 1 and are incremented as major versions are released (1.0, 2.0, 3.0, ...).

Minor releases typically introduce new data objects, or optional additions to data objects, to the marketplace, and may include minor infrastructure additions/changes that do not impact existing SIF-enabled applications and that and that broker vendors and software framework providers have agreed to implement. The first minor version released subsequent to and within a major release has a minor version of 1 and is incremented as new minor versions are released (2.1, 2.2, ...). If a significant number of minor release features is introduced in a

specification, the SIF Association may decide to increment the minor version number by more than 1 (e.g. 1.1 to 1.5), though a number like 1.5 is not an indication of being halfway to a major release, as minor version numbers may be incremented significantly past 10 (2.10, 2.11, ...) as data objects and other minor version features are released.

Corrections resulting from identified errata, as well as textual changes, may be incorporated into a revision release. These typically include minor corrections to messages or data objects, corrections of typographical errors, or corrected/expanded documentation. If major errors in any release are identified, a revision release may incorporate changes more typical of a major or minor release. First major and minor releases have a revision number of 0, which is omitted from the version number (2.0, not 2.0r0); subsequent revision numbers start at 1 and are incremented as new revisions are released (2.0r1, 2.0r2, ...).

2.4 Highlighted Additions/Changes

This release contains the following significant updates and extensions to the SIF specification.

Additions/Changes since 3.4.2 (November, 2017)

- StudentLearningSupport and StudentLearningSupportResponse added to support the businesses learning support requirements.
- StudentLearningSupportParticipation and LearningSupportRegisterDirectory have been removed as they are no longer required.
- WellbeingCharacteristic MedicationType MedicationName added
- ResourceUsage and SystemRole marked for deprecation in 3.5
- GradingAssignment and GradingAssignmentScore updated after Assessment workshops
- StudentGrade and MarkValueInfo added after Assessment workshops
- NAPLAN PNP Codeset BRA deleted and values ETD and OFF added as per advice from ACARA
- LearningStandardDocument and LearningStandardItem updated to Venetian Blind Typing
- Other minor typos, broken links updated in various descriptions
- Privacy Ratings added as annotations at Object Level

3 Data Model

3.1 Introduction

This section presents the XML structure for SIF Data Model common elements and objects in a tabular format for readers less versed in parsing formal XML schema definitions, along with conventions that typically apply in the data model for easy reference.

3.1.1 Format

The Char(acteristics) column for all of the tables in this section use the following codes:

Code	Characteristic					
M	Mandatory element or attribute					
О	Optional element or attribute					
C	Conditional element or attribute					
MR	Mandatory and repeatable element					
OR	Optional and repeatable element					
CR	Conditional and repeatable element					

Mandatory elements MUST be present in Add events, and in non-empty and non-error responses to requests for entire SIF objects (e.g., no SIF_Query/SIF_Query/Object/SIF_Element elements supplied in the request). Mandatory attributes MUST always be present if their corresponding element is present.

SIF Adapters and message brokers MUST supply data according to the types specified in the Type columns and their corresponding equivalents in the most recent schema files associated with this specification. If there is a discrepancy between object and element definitions in this specification and the corresponding schema files, the definition in the schema files takes precedence; every effort will be made to note discrepancies in the errata for this document as they are identified.

3.1.2 Conventions

3.1.2.1 Object Attributes/Primary Keys

While XML attributes are primarily used in SIF to provide additional processing information regarding the associated element content, attributes at the root level of an object have special significance. These attributes serve as the primary key or identifier for the object; in all cases this is no more than a Refid GUID of RefidType

3.1.2.2 Object References

As stated elsewhere, SIF primarily uses GUIDs as object identifiers, primary keys, or Refids. References to primary keys (foreign key references) follow certain conventions in SIF in most objects:

An element or attribute of type ObjectReferenceType holds either the RefId or LocalId of the referenced object;

👫 An element reference that may refer to more than one object type is defined as NamedObjectReferenceType; in addition to RefId and LocalId has an ObjectType element that enumerates which SIF object type is being referenced.

3.1.2.3 Lists/Repeatable Elements

To those accustomed with normalized relational databases, the SIF Data Model will appear to not be especially normalized, especially with regard to repeating groups of data not being separated into their own "tables," or in SIF's case, "objects" with primary/foreign keys to maintain the relationship. Bear in mind that SIF is not a format for storing data; it is a format for transmitting data asynchronously between disparate and distributed systems needing to share data for interoperability; the format this data takes in different systems can vary greatly, and the data related to any given "entity" may come from a variety of sources and systems. The goals of normalization—eliminating redundancy, organizing data efficiently, reducing inconsistencies, etc.—take on a different meaning in a message queuing system. Of primary importance is transmitting the data needed for interoperability in a minimum number of messages. The need to "join" together a great number of separate objects is kept to a minimum in SIF, as individual systems do not have access to all the data required and due to the asynchronous nature of SIF, any one of these systems may take a fair amount of time before returning data necessary for joins (SIF_ExtendedQuery has been developed to communicate a join to a single system that may have direct access to the all the data necessary to efficiently accomplish this task). It's one thing to make a separate request for a student's picture or enrollment information, another entirely to request every available phone number, address and e-mail address separately from the SIF Environment. As such, it is often the case in SIF that repeating data is stored directly in an object, rather than being separated out into a separate object.

Repeating data is very analogous to objects, though, within any given object. In SIF's Publish/Subscribe model, repeating elements in objects can be added to, changed in or deleted from an object, much like objects can be added to, changed in or deleted from a SIF Environment. Within an existing object, all of these actions take place within a Change event, and repeating elements—if any exist initially—are first made available within an object in an Add event or can be obtained directly via requests. Repeatable elements are contained within a parent List element in most SIF objects whether or not they support events, e.g.:

3.1.2.3.1 List

While a unique, primary key may still be identifiable in its child elements, a List is used primarily when:

the list is a cohesive whole conceptually, where supporting or referring to a subset of the list is of little value;

when the list consists only of keys, and no associated data;

the list is informational/temporary state information and not typically persisted; or

when no key exists to uniquely identify items in the list.

Lists are always transmitted as a cohesive unit consisting of the parent list container element and all child elements. If no child elements exist in the list, the list consists of the container element alone. Omission of an optional List in an Add event also implies no list items. In a Change event, omission of the List indicates no changes have been made; otherwise the parent container element and all child elements, if any, are included. Systems storing List data should replace all corresponding data in their systems when persisting the list; likewise when a change is made to one or more list items or when all items in the list are deleted, systems should send the whole list in a Change event.

Example 3.1.2.3.1-1: Indicating an updated list of country citizenships

A system that supports CountriesOfCitizenship updates its local data to reflect United States and German citizenship.

3.1.3 Validation

3.1.3.1 Supported Optional Elements Without Values

Some agents follow the convention of supplying an optional element as empty (e.g. <BirthDate></BirthDate> or <BirthDate> to indicate that the application supports the element, but that it currently has no value available within a given object. To allow for this convention within SIF—as in this example an empty string does not satisfy the xs:date type definition of BirthDate—all optional elements in SIF are defined as nillable [SCHEMA]. To satisfy type constraints on an element while still supplying an empty or "nil" value, agents MUST tag the element with a true value for the nil attribute from namespace http://www.w3.org/2001/XMLSchema-instance [SCHEMA] (e.g. <BirthDate xsi:nil="true"/> where the prefix xsi has been mapped to the namespace http://www.w3.org/2001/XMLSchema-instance), unless an empty value is valid with regard to the element's type definition, in which case supplying the nil attribute value of true is optional.

3.1.3.2 Externally-Defined XML

Note that XML not defined within SIF does not necessarily support ad hoc omission of XML elements at will to conform with the conventions of the SIF Publish/Subscribe Model (where unchanged elements are typically omitted in Change events, and where non-key elements are often omitted in Delete events) or of the SIF Request/Response Model (where a subset of elements can be retrieved from objects with requests). If externally-defined XML occurs within a SIF data object, SIF conventions do not extend to that XML unless that XML is defined to accommodate SIF conventions; the XML, when transmitted, must only conform to any external definitions dictating its structure, if any. Applications should be prepared for the possibility of receiving whole externally-defined XML structures in Change events (regardless of how little or much of the external XML has changed) and possibly also Delete events, likewise in responses even when a subset of the XML structure's child elements may have explicitly been requested.

3.1.3.3 Payload Validation

There are two sets of XSDs available for Validation of Payload.

3.1.3.3.1 Create

The first set, "DataModel" is 'strict' and all of the elements that are required for validation are 'Mandatory' in this suite of XSDs. This suite is traditionally used for Creation of new entities, which generally require validation before being saved into a Data Store.

3.1.3.3.2 Update

The second set, "SIF_Message" is 'lax' and every element within the schema is 'optional' except the 'RefId' the identifying GUID/UUID. (However, required elements are not nillable.) This suite of XSDs are traditionally used for Update and Delete of current entities. If an element is not included in the payload of an Update operation, its value is assumed to be unchanged. In addition, if the payload contains the RefId/UUID only, the consumer must assume that object to be DELETED or that it has been deleted since the original request was made.

3.2 SIF NZ

The New Zealand customisation of the SIF AU data model, includes the following (high-level) changes:

- The SchoolInfo data object from SIF AU is replaced with Provider data object, as the scope of SIF NZ data model is intended to encompass early childhood education, compulsory schooling (K-12) and tertiary education (higher education).
- The Organisation is added in the NZ data model and describes education organisations (such as Kahui Ako) that are known to the NZ education system, not limited to Schools and other Providers.
- StudentPersonal data object doesn't include Alert or MedicalAlert messages; Demographics area includes NZ statistical standard Ethnicity and Iwi affiliations.
- ProviderRelationship data object records relationships between two education providers.
- StudentProviderEnrolment expands on StudentSchoolEnrollment, and has extra complexity to cope with SIF NZ having Providers, rather than Schools.
- lack Includes only StudentAttendanceTimeList & StudentAttendanceSummary from SIF ${

Example 3.2.10-1: Schedule

3.2.11 ScheduleAcademicDay

ScheduleAcademicDay defines an abstract day level construct that is referenced by a teaching group's timetable (TeachingGroupEvent) to determine on which dates meetings will occur.

These academic days may occur in a rotational manner on a daily basis ("A Day", "B Day", "C Day", "A Day", etc...), be tied to weekdays or alternating weeks. The nature of these patterns is specified by the way that they are mapped to the real world calendar using the ScheduleDate endpoint.

ScheduleAcademicDay, in combination with TeachingGroupEvent determines WHICH classes will occur on a given day of the rotation.

Example 3.2.11-1: Schedule Academic Day

3.2.12 ScheduleDate

The core of the scheduling system, that assigns a particular ScheduleAcademicDay and SchedulePeriodTime to the set of calendar dates covered by a particular Schedule.

Each entry in the CalendaDateList determines WHICH meetings will occur on that date (via the ScheduleAcademicDay) and WHEN those meetings will take place (via the SchedulePeriodTime), as well as which ScheduleTerms are in session on that particular CalendarDate

Could be thought of as a member of Schedule data object; but it has been extracted as a separate object, without identifiers, to make it easier to build API endpoint definitions

3.2.14 SchedulePeriod

A SchedulePeriod defines an abstract time slot in which the meeting of a TeachingGroup may take place.

SchedulePeriods do not directly have times because the time at which a given period may occur might vary depending on what day they occur on (for example, on a "full" day period 1 might occur from 9:00 to 10:00, but on a "half" day period 1 might go from 9:00 to 9:30).

A SchedulePeriodTime defines a set of periods that are to occur on a given AcademicDay. It takes the abstract time slots defined by SchedulePeriod (and referenced by TeachingGroupEvent) and assigns start and end times to that set of periods.

SchedulePeriodTime defines WHEN classes will occur on a given day of the rotation

Records assignment of a Staff member to a particular role at a Provider or other EducationOrganisation. A staff member can have multiple concurrent roles at Schools (via Provider data object) and Kāhui Ako (via the EducationOrganisation data object); each role would be a separate StaffAssignment record.

Role assignments can be restricted to categories of Students with the StaffSubjectList and YearLevelList. This allows for assignment to roles with particular responsibility for general cohorts of students, such as "Head of Department (Maths)" or "Year 8 Student Dean".

While assignment to student contact roles such as Subject Teacher, Homeroom Teacher, Whānau Teacher or House Master is made with this data object; Details of the particular group of specific students the staff member is responsible for are made via the TeachingGroup data object.

4 Domain Map

This section presents the SIF Data Objects in each of the SIF Data Model domains, for easier navigation:

4.1 Domain: Organisation

The Organisation domain describes education provider entities (ECEs, Schools & Tertiary Education Institutions), Communities (Kāhui Ako, Learning Support Clusters, etc.) the relationships between them, and the Staff that work at them.

Background documentation on the Organisation domain is available here

Organisation

Education Provider entities (ECEs, Schools & Tertiary Education Institutions), Communities (Kāhui Ako, Learning Support Clusters, etc.), and others (Teen Parent Units, Activity Centres. etc.)

OrganisationRelationship

Records a recognised relationship between two education Organisations. The two organisations are referred to as the Source Organisation and the Related Organisation.

Relationship Type records the nature of the relationship between the two organisations, and gives guidance on which is the Source Organisation and which is the Related Organisation.

StaffPersonal

All the personal contact and demographic information relating to a staff member, who might be a teacher or other employee of a Provider.

Non personal information relating to the staff member's relationship with Providers is stored in the StaffAssignment data object.

StaffAssignment

Records assignment of a Staff member to a particular role at a Provider or other EducationOrganisation. A staff member can have multiple concurrent roles at Schools (via Provider data object) and Kāhui Ako (via the EducationOrganisation data object); each role would be a separate StaffAssignment record.

Role assignments can be restricted to categories of Students with the StaffSubjectList and YearLevelList. This allows for assignment to roles with particular responsibility for general cohorts of students, such as "Head of Department (Maths)" or "Year 8 Student Dean".

While assignment to student contact roles such as Subject Teacher, Homeroom Teacher, Whānau Teacher or House Master is made with this data object; Details of the particular group of specific students the staff member is responsible for are made via the TeachingGroup data object.

Staff Teaching Group Assignment

Records assignment of a Staff member to a particular role with a particular TeachingGroup at a Provider

ProviderCourse

A Provider defined Course that Students enrol in, and may be assessed for, and achieve passes in.

TeachingGroup

Identifies a particular class or other group of students. Such groups can have multiple staff assigned in a variety of roles, may be assigned students from multiple year levels and may be taught multiple courses.

AcademicDepartment

Information about an academic department within a provider, e.g. Maths Department.

4.2 Domain: Student & Whānau

The Student domain describes Student entities, their Whānau, and the relationships between them.

StudentPersonal

Contains all the personal information related to the student.

StudentContactPersonal

Information about a Student's whānau member.

StudentContactRelationship

A relationship between a person who is part of a Student's whānau and that Student. Relationship properties include the relationship type and roles played by the student contact in respect of the student.

Individual details about the student and student contact are provided in other data objects - StudentPersonal and StudentContactPersonal respectively.

StudentConsent

A record of Student's consent or non-consent to some action taking place.

4.3 Domain: Enrolment

The Enrolment domain describes transactional entities whereby Students enrol at Providers, in LearningProgrammes, in Sections, or in Activities.

Background documentation on the Enrolment domain is available here

StudentProviderEnrolment

A student's association with an education provider for the purpose of receiving educational servics.

Provider enrolments are specific to a particular calendar year; and contain one of ECE, School or Tertiary Enrolment sub-object.

Student Teaching Group Enrolment

Records a student's arrival to and departure from a TeachingGroup.

StudentPersonal

Contains all the personal information related to the student.

Organisation

Education Provider entities (ECEs, Schools & Tertiary Education Institutions), Communities (Kāhui Ako, Learning Support Clusters, etc.), and others (Teen Parent Units, Activity Centres, etc.)

ProviderCourse

A Provider defined Course that Students enrol in, and may be assessed for, and achieve passes in.

TeachingGroup

Identifies a particular class or other group of students. Such groups can have multiple staff assigned in a variety of roles, may be assigned students from multiple year levels and may be taught multiple courses.

StaffPersonal

All the personal contact and demographic information relating to a staff member, who might be a teacher or other employee of a Provider.

Non personal information relating to the staff member's relationship with Providers is stored in the StaffAssignment data object.

Staff Teaching Group Assignment

Records assignment of a Staff member to a particular role with a particular TeachingGroup at a Provider

4.4 Domain: Hauora / Wellbeing

The Hauora / Wellbing domain records everything from Student's health conditions through behavioural incidents (both good and bad) to Student's aspirations and goals participation in extra-curricular activities and the provision of Learning Support programmes.

StudentConsent

A record of Student's consent or non-consent to some action taking place.

Well being Characteristic

Core Wellbeing Characteristic that is integral to the Student. This may be a Medical condition, special needs or a characteristic such as a known disability or any other characteristic or condition that is student specific and impacts their learning.

WellbeingAlert

Alert indicating to teachers and systems that this student has a 'concern' that needs to be known for 'duty of care', which could be Medical, Legal or other.

The alert may merely draw attention to Wellbeing Characteristics or Events, that contain more detail.

WellbeingEvent

Record of an event happening that impacts on a school's duty of care to its students. The event records both 'positive' and 'negative' behaviours and is not just the recording of a discipline incident or an accident.

WellbeingResponse

A record of the outcome and follow ups generated by a WellbeingEvent

WellbeingAppeal

Records detail of any "appeal" or "request" made by involved parties in regard to a negative/punitive Wellbeing Response that was the result of a student Wellbeing Event.

Student Learning Support

Provides information about a student's learning support.

Student Learning Support Response

Provides information about a response provided for a students learning support need.

Document

The universally unique identifier for the data object record that is used across systems.

StudentVoice

A record of a student's interests as well as their social, academic and academic goals.

StudentPersonal

Contains all the personal information related to the student.

Organisation

Education Provider entities (ECEs, Schools & Tertiary Education Institutions), Communities (Kāhui Ako, Learning Support Clusters, etc.), and others (Teen Parent Units, Activity Centres. etc.)

StudentPhysicalRestraint

Provides information about an incident where staff members or other parties used physical restraint on a child.

StaffPersonal

All the personal contact and demographic information relating to a staff member, who might be a teacher or other employee of a Provider.

Non personal information relating to the staff member's relationship with Providers is stored in the StaffAssignment data object.

StudentActivityParticipation

This object provides information on a co-curricular or extra-curricular activity in which a student participates during a given school year.

4.5 Domain: Schedule

The Schedule domain describes the school's schedule or timetable, including the structure of the school day; how many periods per day; how many days in the timetable rotation; which teaching groups meet in which periods. Regular adjustments for particular days of the rotation, as well as ad-hoc adjustments for specific dates are recorded; as well as custom period times on particular rotation days or specific dates.

Background documentation including worked examples of the Schedule domain is available here

Organisation

Education Provider entities (ECEs, Schools & Tertiary Education Institutions), Communities (Kāhui Ako, Learning Support Clusters, etc.), and others (Teen Parent Units, Activity Centres. etc.)

Teaching Group

Identifies a particular class or other group of students. Such groups can have multiple staff assigned in a variety of roles, may be assigned students from multiple year levels and may be taught multiple courses.

ProviderCourse

A Provider defined Course that Students enrol in, and may be assessed for, and achieve passes in.

Schedule

A rotation of ScheduleAcademicDays that a Provider has in place to manage their timetable.

ScheduleTerm

Provides information about school terms, tertiary terms etc., either at a national, or provider level, within a school year. If the term is being supplied at a national level, no provider information will be linked.

ScheduleException

Defines events that may or may not impact the schedule. These events may simply be for display, or may affect the schools academic schedule.

ScheduleDate

The core of the scheduling system, that assigns a particular ScheduleAcademicDay and SchedulePeriodTime to the set of calendar dates covered by a particular Schedule.

Each entry in the CalendaDateList determines WHICH meetings will occur on that date (via the ScheduleAcademicDay) and WHEN those meetings will take place (via the SchedulePeriodTime), as well as which ScheduleTerms are in session on that particular CalendarDate

Could be thought of as a member of Schedule data object; but it has been extracted as a separate object, without identifiers, to make it easier to build API endpoint definitions

ProviderCalendarEvent

Provides information about a holiday or other Event that may or may not impact upon the schedule of a provider.

SchedulePeriodTime

A SchedulePeriodTime defines a set of periods that are to occur on a given AcademicDay. It takes the abstract time slots defined by SchedulePeriod (and referenced by TeachingGroupEvent) and assigns start and end times to that set of periods.

SchedulePeriodTime defines WHEN classes will occur on a given day of the rotation

SchedulePeriod

A SchedulePeriod defines an abstract time slot in which the meeting of a TeachingGroup may take place.

SchedulePeriods do not directly have times because the time at which a given period may occur might vary depending on what day they occur on (for example, on a "full" day period 1 might occur from 9:00 to 10:00, but on a "half" day period 1 might go from 9:00 to 9:30).

ScheduleAcademicDay

ScheduleAcademicDay defines an abstract day level construct that is referenced by a teaching group's timetable (TeachingGroupEvent) to determine on which dates meetings will occur.

These academic days may occur in a rotational manner on a daily basis ("A Day", "B Day", "C Day", "C Day", etc...), be tied to weekdays or alternating weeks. The nature of these patterns is specified by the way that they are mapped to the real world calendar using the ScheduleDate endpoint.

ScheduleAcademicDay, in combination with TeachingGroupEvent determines WHICH classes will occur on a given day of the rotation.

TeachingGroupEvent

Defines a single SchedulePeriod in a Schedule where the TeachingGroup meets.

4.6 Domain: Attendance

The Schedule & Attendance domain describes the school's transactional entities that record a Student's attendance at & absence from Providers. Attendance is recorded at either Day, Half-Day or individual Period granuality at the choice of the Provider; and reported back in summary form.

Background documentation on the Attendance domain is available here

StudentPersonal

Contains all the personal information related to the student.

Organisation

Education Provider entities (ECEs, Schools & Tertiary Education Institutions), Communities (Kāhui Ako, Learning Support Clusters, etc.), and others (Teen Parent Units, Activity Centres. etc.)

TeachingGroupMeetingAttendance

Defines a teaching group meeting and the attendance of each student at that meeting. Meetings may either be scheduled or ad hoc.

StudentAttendanceSummary

Provides a summary of a student's daily attendance and membership information for a given provider during the time period between the StartDate and EndDate, inclusive. There will be multiple instances of this object for a student in a school over the course of a school year. This summary may be generated by aggregating more granular attendance records, in which case all fields will be read-only; and RefId element may not be applicable.

TeachingGroup

Identifies a particular class or other group of students. Such groups can have multiple staff assigned in a variety of roles, may be assigned students from multiple year levels and may be taught multiple courses.

Schedule

A rotation of ScheduleAcademicDays that a Provider has in place to manage their timetable.

TeachingGroupEvent

Defines a single SchedulePeriod in a Schedule where the TeachingGroup meets.

4.7 Domain: Aromatawai / Assessment

The Assessment domain describes transactional entities that record assessment of Student's learning. The domain covers everything from a simple in-class assessment task (eg grading assignment, test or essay) through to end of Course or year final marks, and curriculum progress reports as well as formal external assessments performed by external agencies (eg. NZQA, Cambridge International Education, International Baccalaureate, etc).

StudentPersonal

Contains all the personal information related to the student.

StudentAssessmentTaskRegistration

The student's registration for an assessment task they are intending to participate in.

AssessmentTask

This object provides information about a particular assignment, allows applications to synchronize each other's assignment tables, gathers the definition for a StudentAssessmentTask object, etc.

StudentAssessmentTask

Record of a student's attempt at a particular assessment task.

StudentAssessmentTaskResult

Records the result achieved by a single student at a particular assessment task.

StudentAttainment

Records a student gaining an Attainment e.g. NCEA Qualification, Learning Standard etc.

Credential

A qualification or other award published by a national body, professional association or other interested party. The Credential recognises a set of learning that students have undertaken and successfully completed.

LearningStandard

A curriculum standard or the like published by a national body, professional association or other interested party. The LearningStandard describes a set of learning that students are expected to undertake.

ProviderCourse

A Provider defined Course that Students enrol in, and may be assessed for, and achieve passes in.

Organisation

Education Provider entities (ECEs, Schools & Tertiary Education Institutions), Communities (Kāhui Ako, Learning Support Clusters, etc.), and others (Teen Parent Units, Activity Centres. etc.)

TeachingGroup

Identifies a particular class or other group of students. Such groups can have multiple staff assigned in a variety of roles, may be assigned students from multiple year levels and may be taught multiple courses.

Student Curriculum Progress Report

A single curriculum progress and achievement report provided for a student. Used in technology centres allowing the host provider to report on student progress to their base school.

May be extended in the future to cover reporting on other curriculum areas.

ScoreMax	О	The maximum value possible for the score.	xs:decimal
ItemNumber	О	The Item within an NZQA Assessment Task that the score is for. When a marker marks an external assessment (a paper for a standard in an examination, for example) they provide a score of 0-8 for each item (question) in the paper. Typically a paper will have 3 items for a total score of 24. However there can be more items than this. The individual item scores, and the total are then sent back to NZQA's eQA system from the marking application.	xs:int

Figure A.18-1: BaseNameType

Element/@Attribute	Char	Description	Type
BaseNameType		Base type, without attributes, for Name elements, primarily to allow structure to be leveraged with different Type attribute values. BaseNameType is the base type for the following data types: • VerifiedNameType	
Title	О	A title or prefix associated with the name.	xs:normalizedString
FamilyName	С	Also known as Last Name, although some cultures may not present a family name as the last name.	xs:normalizedString
GivenName	С	Also known as First Name, although some cultures may not present this name as the first element in a name. May contain a composite of all given names.	xs:normalizedString
MiddleName	О	Where more than one Given Name, these may be combined in one composite field or else populated in several elements.	xs:normalizedString

Element/@Attribute	Char	Description	Туре
SecondMiddleName	О	Middle names can be sent altogether in one element or if the source system has more than one middle name field, they can be spread across two elements. SecondMiddleName will either contain no values, or it will hold the person's second and subsequent middle names while MiddleName will hold the person's first middle name.	xs:normalizedString
FamilyNameFirst	0	An indicator used to identify the naming conventions used by some predominantly non-European, ethnic or language groups and related to the display nature of a name.	NZCodeSetsYesOrNoCategoryTyp
PreferredFamilyName	0	A preferred version of the Family Name. Note: A name cannot have both a Preferred Family and Preferred Given Name within the same Name structure – only one of these fields should be populated. If a person does have both a Preferred Family and Preferred Given Name then this must be populated as a separate Name of type 'Preferred'.	xs:normalizedString
PreferredFamilyNameFirst	О	An indicator used to identify the naming conventions used by some predominantly non-European, ethnic or language groups and related to the display nature of a name.	NZCodeSetsYesOrNoCategoryType
PreferredGivenName	0	A preferred version of the Given Name. Select shared and named code sets defined in SIF are included here for reference

AU code set enumerations are defined by NSIP primarily for use in the Australian SIF Data Model, but some are re-used by the New Zealand SIF Data Model

NZ Code Sets

Address Type

Address type allows an address to be categorised according to its component structure. Address type can be used to build processing rules for validating, managing and presenting addresses. Address type is independent of the use of the address by any party. To describe how a party may use an address (residence, billing, term address etc) see AddressRoleType

Delivery Service Defined by New Zealand Post, and used exclusively for NZ Post services other than standard mail delivery. Addresses in this class include PO Box, Private Bag, and Counter Example: Private Bag 2345, Auckland, 1142 FC A foreign address identifies a location outside of New Zealand. Example: Rudolf-Diesel-Strasse 14, 54595 Prüm, Germany RU Rural Post Delivery Defined by New Zealand Post, these addresses are assigned by NZ Post for customers who purchase a rural delivery service (mail and also other goods). They will have the same number and roadname components as the street address, and may have the same region component. They do not have a component that identifies the locality the address is within. The locality and city or town components are replaced by components that identify the rural delivery route (RD number), and the town from which the rural delivery route starts and finishes (the mail town). Only addresses of this class can contain these components. Example: 121 Waitaha Road, RD 1, Ross, 7885 ТН Thoroughfare Also called 'Street' addresses, The most general, and widely used type of address, and can contain the widest variety of components In general a thoroughfare address will include components for a number, a roadname, and a locality. They cannot contain any of the components specific to a delivery service, rural post delivery, or water address. These addresses are used to find a location. Example: 30 - 40 Lambton Quay, Wellington, 6165 Water Where properties have no road access, but do have access to water frontage (coastline or riverbank or lakefront), a water address uses the name of a water feature (for example, islands, rivers, bays, or peninsulas).

API Client Role

Iwi

An iwi, or Māori tribe, is one of the largest kinship groupings and is generally made up of several hapū that are all descended from a common ancestor. Hapū are clusters of whānau where the whānau is usually an extended family grouping consisting of children, parents, often grandparents, and other closely related kin.

	The enrolment application has been declined by the Provider, or discontinued by the Student, prior to becoming an ACTIVE enrolment.
PEN	Pending
	The enrolment has been accepted by the Provider, taken up by the Student, and the student has attended their first day; but the enrolment is unable to be set to ACTIVE, because there is still an ACTIVE enrolment for the student at a (previous) provider. Once the blocking Provider has put their enrolment to WITHDRAWN, this enrolment can be moved to 'ACTIVE'.
WIT	Withdrawn The Student has left the Provider, after the enrolment was made ACTIVE

Spatial Unit Type

A classification of geographical boundaries or statistical areas as defined by Statistics NZ's geographic hierarchy.

lassification of geographical boundaries or statistical areas as defined by Statistics NZ's geographic hierarchy.		
Area Unit		
Area units are aggregations of meshblocks. They are non-administrative areas that are in between meshblocks and territorial authorities in size. Area units must either define or aggregate to define, regional councils, territorial authorities and urban areas.		
Statistics NZ Classification of Area Unit 2013 v1.0.0		
Community Board		
(aka Local Board within Auckland) Local boards provide governance at the local level within Auckland Council. They enable democratic decision making by, and on behalf of communities within the local board area.		
Statistics NZ Community Board 2013 v1.0.0		
General Electoral District		
The general electoral districts as constituted under the Electoral Act 1993.		
Statistics NZ General Electoral District 2014 v1.0.0		
B Mesh Block		
A meshblock is the smallest geographic unit for which statistical data is collected and processed by Statistics New Zealand.		
A meshblock is defined by a geographic area, which can vary in size from part of a city block to a large area of rural land. Each meshblock borders on another to form a network covering all of New Zealand, including coasts and inlets and extending out to the 200-mile economic zone.		
Statistics NZ Statistical Standard for Meshblock 2013 v1.0.0		
ME Māori Electoral District		
Māori electoral districts are the voting districts for parliamentary elections for people who choose to be on the Māori Electoral Roll.		
Statistics NZ Māori Electoral District 2014 v1.0.0		
Regional Council		
The top tier of local government in New Zealand, defined by the Local Government Act 2002, which requires the boundaries of regions to conform as far as possible to one or more water catchments. When determining regional boundaries, the Local Government Commission gave consideration to regional communities of interest when selecting water catchments to be included in a region. It also considered factors such as natural resource management, land use planning and environmental matters.		
Statistics NZ Regional Council 2013 v1.0.0		

The second tier of local government in New Zealand, defined under the Local Government Act 2002 as a city council or district council. There are 67 territorial authorities consisting of 12 city councils, 53 districts, Auckland Council, and Chatham Islands Council.

Statistics NZ Territorial Authority 2013 v1.0.0

Unda Area

Urban Area

Urban Areas are statistically defined areas with no administrative or legal basis. There is a three part hierarchical sub-division of urban areas into: main urban areas, secondary urban areas, minor urban areas. Together the populations in main, secondary and minor urban areas comprise the statistically defined urban population of New Zealand. The urban area classification is designed to identify concentrated urban or semi-urban settlements without the distortions of administrative boundaries.

Statistics NZ Urban Area 2013 v2.0.0

Ward

Wards are defined under the Local Electoral Act 2001 and result from the division, for electoral purposes, of the district of a territorial authority. The ward system was designed to allow for the recognition of communities within a district and to increase community involvement in the local government system.

W	Withdrawal
WE	Whole Exclusion

Teaching Group Type

Provides the means of identifying the type of group such as Roll class, Subject class or Homeroom and allows systems to treat them accordingly

HR	Home Room
	The TeachingGroup is a class used for both teaching and roll taking.
RC	Roll Class
	The TeachingGroup is a class only used for taking daily attendance.
SC	
	Subject Class
	The TeachingGroup is a class only used for teaching.

Technology Class

Code set denoting a class or subject area from the technology curriculum that the progress report covers.

DE	3D Design
FD	Food
НМ	Hard Materials
MM	Multimedia

Technology Curriculum Level

 $Code \ set \ denoting \ the \ technology \ curriculum \ level \ that \ the \ student's \ progress \ report \ is \ being \ made \ against. \ e.g. \ 2, \ 3, \ 4 \ or \ 5.$

2	Level 2
3	Level 3
4	Level 4

Technology Learning Strand

Code list denoting the learning strands from the Technology curriculum that can be covered as part of a technology class.

	Nature of Technology
	Technological Knowledge
TP	Technological Practice

Verification Source

Records the source of the identity or eligibility verification, that has been made. Mostly it is merely a record of the kind of document that has been presented; but occasionally it is down to Principal or Ministry discretion / approval.

Wellbeing Characteristic Sub Sub Category

Code set denoting codes that provide an additional layer of detail around a wellbeing characteristic sub category. For examples for the learner's support need sub category, e.g. if the support need of 'Vision' is selected for the user, the sub needs 'Low Vision' and 'Blind' are available to further define the type of vision issue the learner has. Not all support needs have sub needs.

Appendix C: External Code Sets

All code sets defined by external bodies and referenced within SIF are included here for reference. The left column in each table contains the individual code values that are used in SIF elements and attributes that reference these code sets. These sets of code values are closed and normative for a given version of this specification. Including codes not provided here in corresponding SIF elements and attributes can lead to XML validation errors in installations where the zone integration server or any agent is validating XML messages; the SIF data model allows for locally-defined codes, where deemed appropriate, in the OtherCodeList element. The right column of each table may provide a textual equivalent or description of the corresponding code, and is provided for informational purposes only. The referenced sources for these code sets serve as the authorities for all descriptions and semantics, and for the definition and maintenance of the code set values themselves. In each release of this specification the SIF Association endeavors to synchronize referenced code sets with updates from external sources.

International Standards Organization (ISO)

3166 Country

A country is a geopolitical entity recognised by the New Zealand government. The term country may include

- Independent countries recognised by the New Zealand Government
- Units that are recognised geographic areas
- administrative subdivisions of the United Kingdom
- overseas dependencies, external territories of independent countries.

Conforms to the International Standard ISO 3166 Codes for the Representation of Names of Countries and their Subdivisions (ISO 3166-1:2013). Education adopts the alpha-3 representation of this standard.
